

ALMAT ZHEZBAYEV

Hong Kong

☎ (+852) 6359-4895 ☎ (+7) 7718997711 ✉ azhezbayev@connect.ust.hk  

Education

Hong Kong University of Science and Technology

Sep. 2022 – May. 2026

Bachelor of Science in Mathematics

Math:	Probability Abstract Algebra	Discrete Math Multivariable Calculus	Matrix Computation Math Analysis	Linear Algebra Real Analysis
CS:	Java Programming Design of Algorithms	Programming with C++ Operating Systems	OOP and Data Structures Machine Learning	Computer Organization Cloud Computing

Honors: IBO team member, HKUST admission scholarship, UBS coding challenge 2025 – Achieved top-third finish

Experience

HedgeSPA

May 2026 – August 2026

Java Developer

- Productionized fixed-income signal generation code by refactoring research Python scripts into a coherent application workflow.
- Designed and developed a production-level AI agent system using Rasa, React, Java, and relational database architecture.
- Implemented Java backend components including REST API controllers, service-layer business logic, database repositories, and table schemas.

TUROID

December 2024 – August 2025

Full-Stack AI Engineer

- Built AI-powered customer support systems with real-time messaging, human/AI routing, RAG-based automated replies, and natural-language-to-SQL workflows.
- Developed an automated bank-statement parsing pipeline using Celery, Redis, and AI tools to extract transactions and key financial data into structured JSON.
- Deployed production Python/JavaScript applications on AWS EC2 with Nginx during an 8-month placement.

Neopets

June 2024 – August 2024

Game Developer

- Built Chrome Extension pet game from scratch with feeding, play, and real-time multiplayer mechanics.
- Developed multiplayer rooms with live pet interactions and real-time chat with text messages and reactions.
- Created user progression system with login streaks and milestone-based rewards triggering upon achievement.

WeMakeApp LTD

December 2023 – January 2024

Junior SWE

- Built responsive frontend for dating app with landing, about-us, and terms pages using React and TypeScript.
- Implemented interactive UI components including sliding navigation bar and user review carousel.
- Integrated multi-language support (English/Cantonese) with dynamic routing and seamless language switching.

Projects

Algorithmic Crypto Trading Bot

Spring 2026

- Built an end-to-end Python trading system for crypto markets with Binance REST/WebSocket data ingestion, EMA/SMA signal generation.
- Built a backtesting engine for historical market data that reported core performance metrics and tested strategies on permuted price series to detect luck-driven results and overfitting risk.
- Integrated live trading infrastructure with signed exchange requests, order validation, precision handling, and dry-run execution for safer deployment workflows.

Deal Maker

Spring 2025

- WhatsApp broadcast automation tool with contact scraping, AI copy generation, and mass messaging capabilities.
- Built browser automation pipeline using Puppeteer with job queue, retry logic, and 98% delivery success rate.

Technical Skills

Languages: Python, Java, JavaScript, C++, SQL

Developer Tools: VS Code, GitHub, Git, Figma, AWS, EC2, S3 bucket

Technologies/Frameworks: React, Vite, Tailwindcss, Next.js, Express, MongoDB, socket.io, Postgres, DynamoDB
